

How alike are we
on the inside?

Join the world's largest citizen science microbiome project

The Microsetta Initiative (TMI) is an academic research project that seeks to collect microbiome samples and rich phenotypic data from across the globe. The material gathered will be generated into high quality, technically consistent data for anyone to reuse, to increase the pace of microbiome research.

In this pursuit, they seek to democratize the process by empowering “citizen-science” and strengthening educational outreach. To learn more visit : microsetta.ucsd.edu
